EST. 2006

No plastic.
No metal.
No compromise.

P R O M I S E

The constant and obsessive search
for the most sustainable solutions
available, never compromising
quality or design.

M I S S I O N

natural cork

Cork is one of the most sustainable and versatile natural materials in the world. Bark is harvested from the tree every 9-12 years. Harvesting bark does not harm the tree. Each time cork is harvested the cork bark regenerates itself. In fact, cork trees live between 100 and 300 years. Romans were known to be the first to use cork in footwear, to improve comfort.

M A T E R I A L S

natural crepe

Crepe is a sustainable, organic material produced with the sap extracted from the Seringueira tree (Hevea Brasiliensis).

The process of creating crepe soles came from the idea of producing soles the same way that the indigenous people of South America did. We only use sap extracted from the Hevea tree.

This harvesting does not weaken the tree, far from it, it actually helps it flourish.

M A T E R I A L S

biodegradable leather

We source our leathers in Europe, only from sustainable partner farms, making sure there is no intensive crops or deforested fields linked to our suppliers or their system. On top of that, we banned any use of metals, like chromium, and we promise you that no toxic dyes are used in the process of tanning.

M A T E R I A L S

organic cotton

Organic cotton is grown without the use of any synthetic agricultural chemicals such as fertilizers or pesticides aside from the ones allowed by the certified organic labeling . As a result, it doesn't poison the water, soil or air, and is even beneficial to the environment.

M A T E R I A L S

We believe in fair trade and local development. All our shoes are made right around the corner, by skilled, experienced hands. We have a collaborative and close relationship with all our partners and believe that is the only way to put the best possible pair in your feet.
